

Hach WIMS™

doForms™ Portable

Solution

Overview

Easily collect Hach WIMS mobile data with Android, iPhone and iPad mobile devices with doForms. Your field staff can collect data from anywhere with familiar devices at any time and automatically import the data to your WIMS Data Management system.

Features and Benefits

Collect Accurate, Timely Data in the Field

- Use your existing smartphones and tablets to collect data in the field
- Store and forward – You do not need to be connected to the internet to collect data
- Once connected, your data is automatically imported to WIMS
- Range checking in the field allows quick problem identification and provides accurate data
- No more paper forms and no “interpreting” handwritten notes and numbers
- Data is updated regularly and available in WIMS immediately after connecting
- With doForms, your data is securely stored in geo-redundant Google datacenters with SSAE 16/ISAE 3402 Type II certifications until it is securely moved to WIMS

Easy Form Creation

- doForms provides the most powerful, easy-to-use web-based form creation software available. You don't need to be a specialist to use it; you just need to know what you want your forms to do.
- Anyone with office software experience can create mobile data forms.
- Create forms that mimic your routes for data collection. The user enters a result and swipes to next variable on route.
- Push routes to your mobile devices while in the field. You don't have to bring devices to a central location to sync routes and data. Anytime they are connected to the internet, the forms and data can be synced.

System Requirements and Ordering Information

- Hach WIMS v7.4 or later
- doForms Professional account

Contact doForms www.doforms.com for account set up and information
